Development of the kidney

Late changes of the development of the kidney:

1) **Changes in shape:** At first the kidney is lobulated, then becomes smooth at the end of 1st year of infancy.
2) **Ascent of the kidney:** Initially, the kidneys lie in the pelvis, later, they move upward to the abdomen.
3) **Change in the direction:** Initially the hilum of the kidney faces ventrally, as the kidney ascends it rotates medially 90°.
