Development of the Ureter

Origin:

- ureteric bud which is an outgrowth from the mesonephric duct.

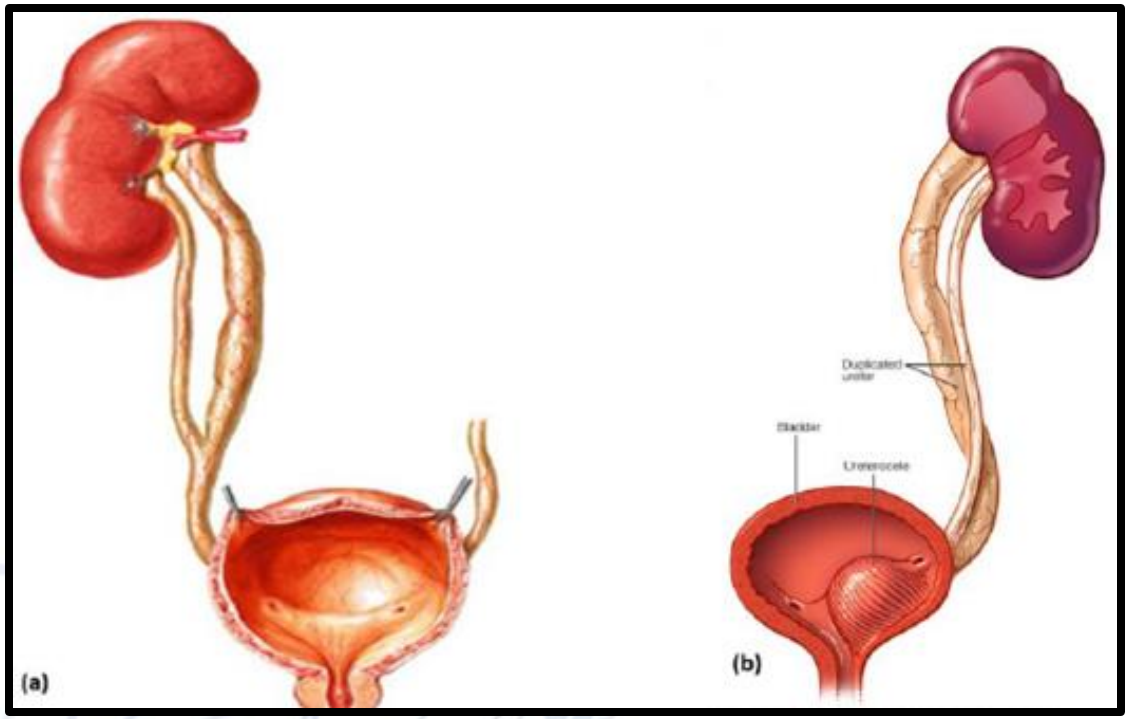

ANU MEDICAL SCHOOL PROGRAM

Development of the Ureter
Congenital anomalies of the ureter

1- Double ureter:

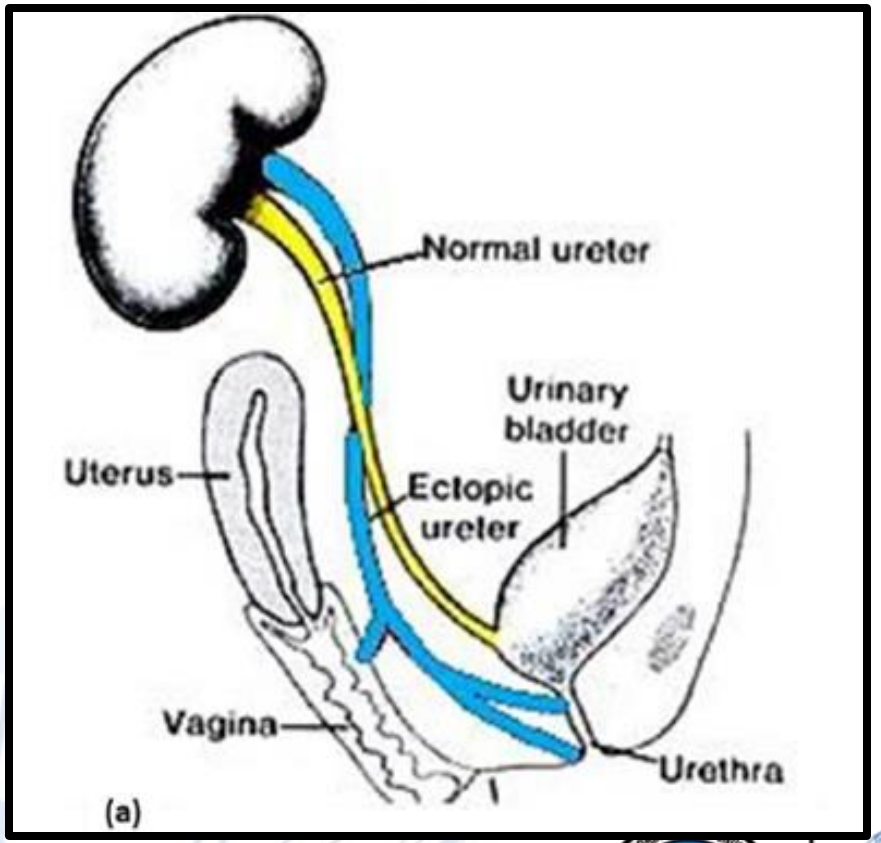

- Early splitting of ureter completely or partially. ureters open into the bladder separately, or unite and form one tube that opens in the bladder.

Development of the Ureter
Congenital anomalies of the ureter

2. Ectopic ureter:

- It opens anywhere except in the urinary bladder.

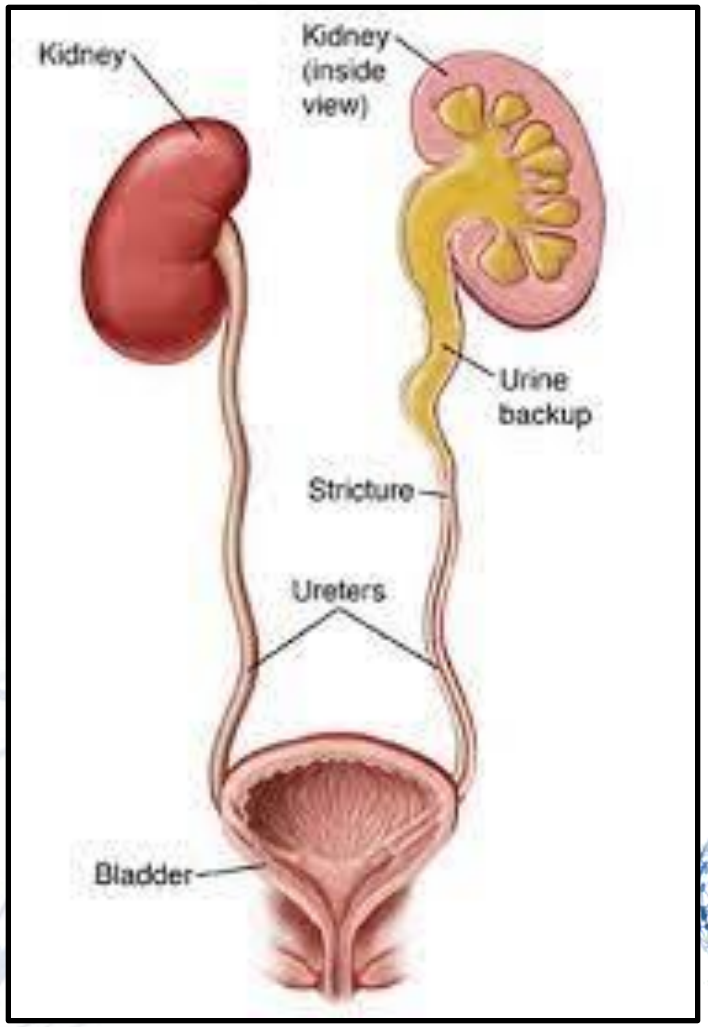

ANU MEDICAL SCHOOL PROGRAM

Development of the Ureter
Congenital anomalies of the ureter

3. Congenital ureteric stenosis:

Cause: due to Failure of proper canalization of ureter. It is usually associated with hydronephrosis & hydro-ureter proximal to the obstruction. Such cases need early management to avoid renal failure especially if bilateral.
