Coverings of the kidney

ANU MEDICAL SCHOOL PROGRAM

The Kidney

Fibrous capsule: This surrounds the kidney and is closely applied to its outer surface.

Perinephric fat: This covers the fibrous capsule.

Renal fascia: This is a condensation of connective tissue that lies outside the perinephric fat and encloses the kidneys and suprarenal glands.

Paranephric fat: This lies external to the renal fascia. The pararnephric fat supports the kidneys and holds them in position on the posterior abdominal wall.
