Internal structure of the kidney :

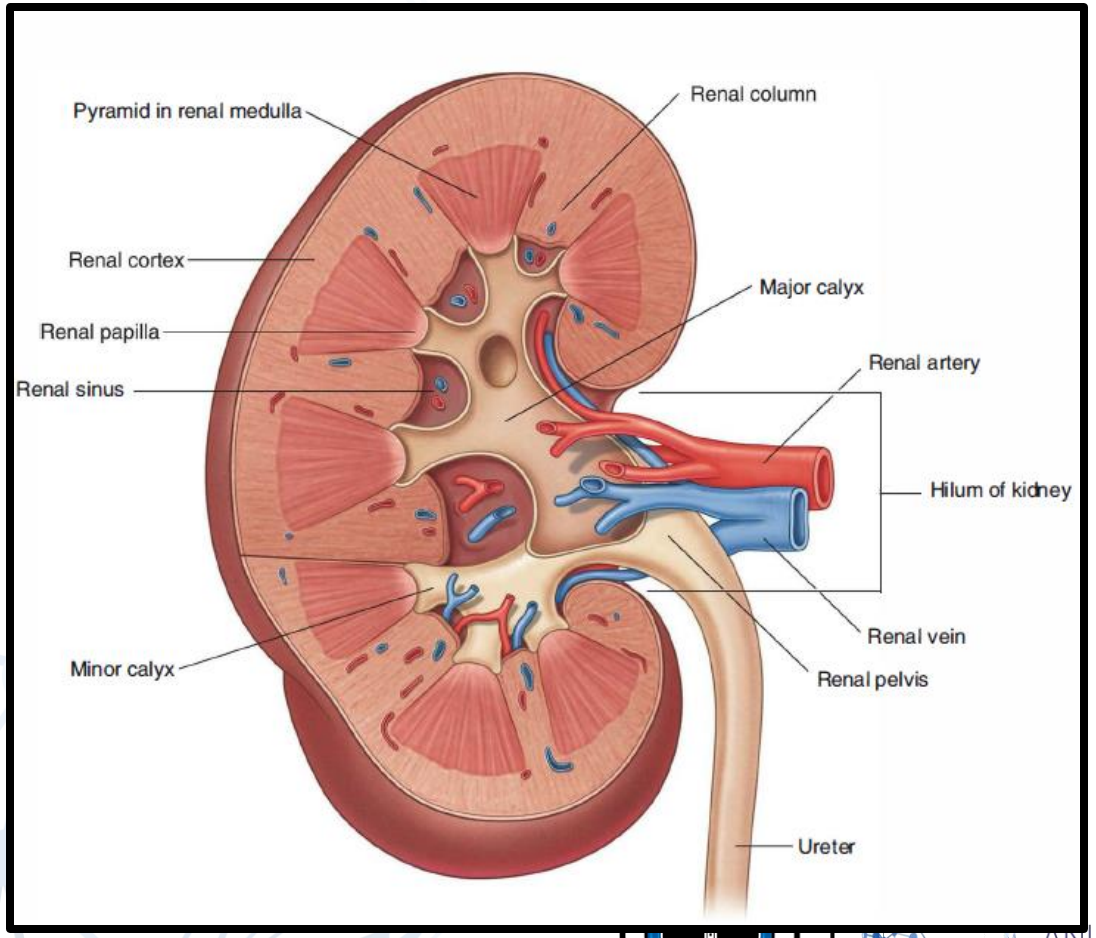

The Kidney

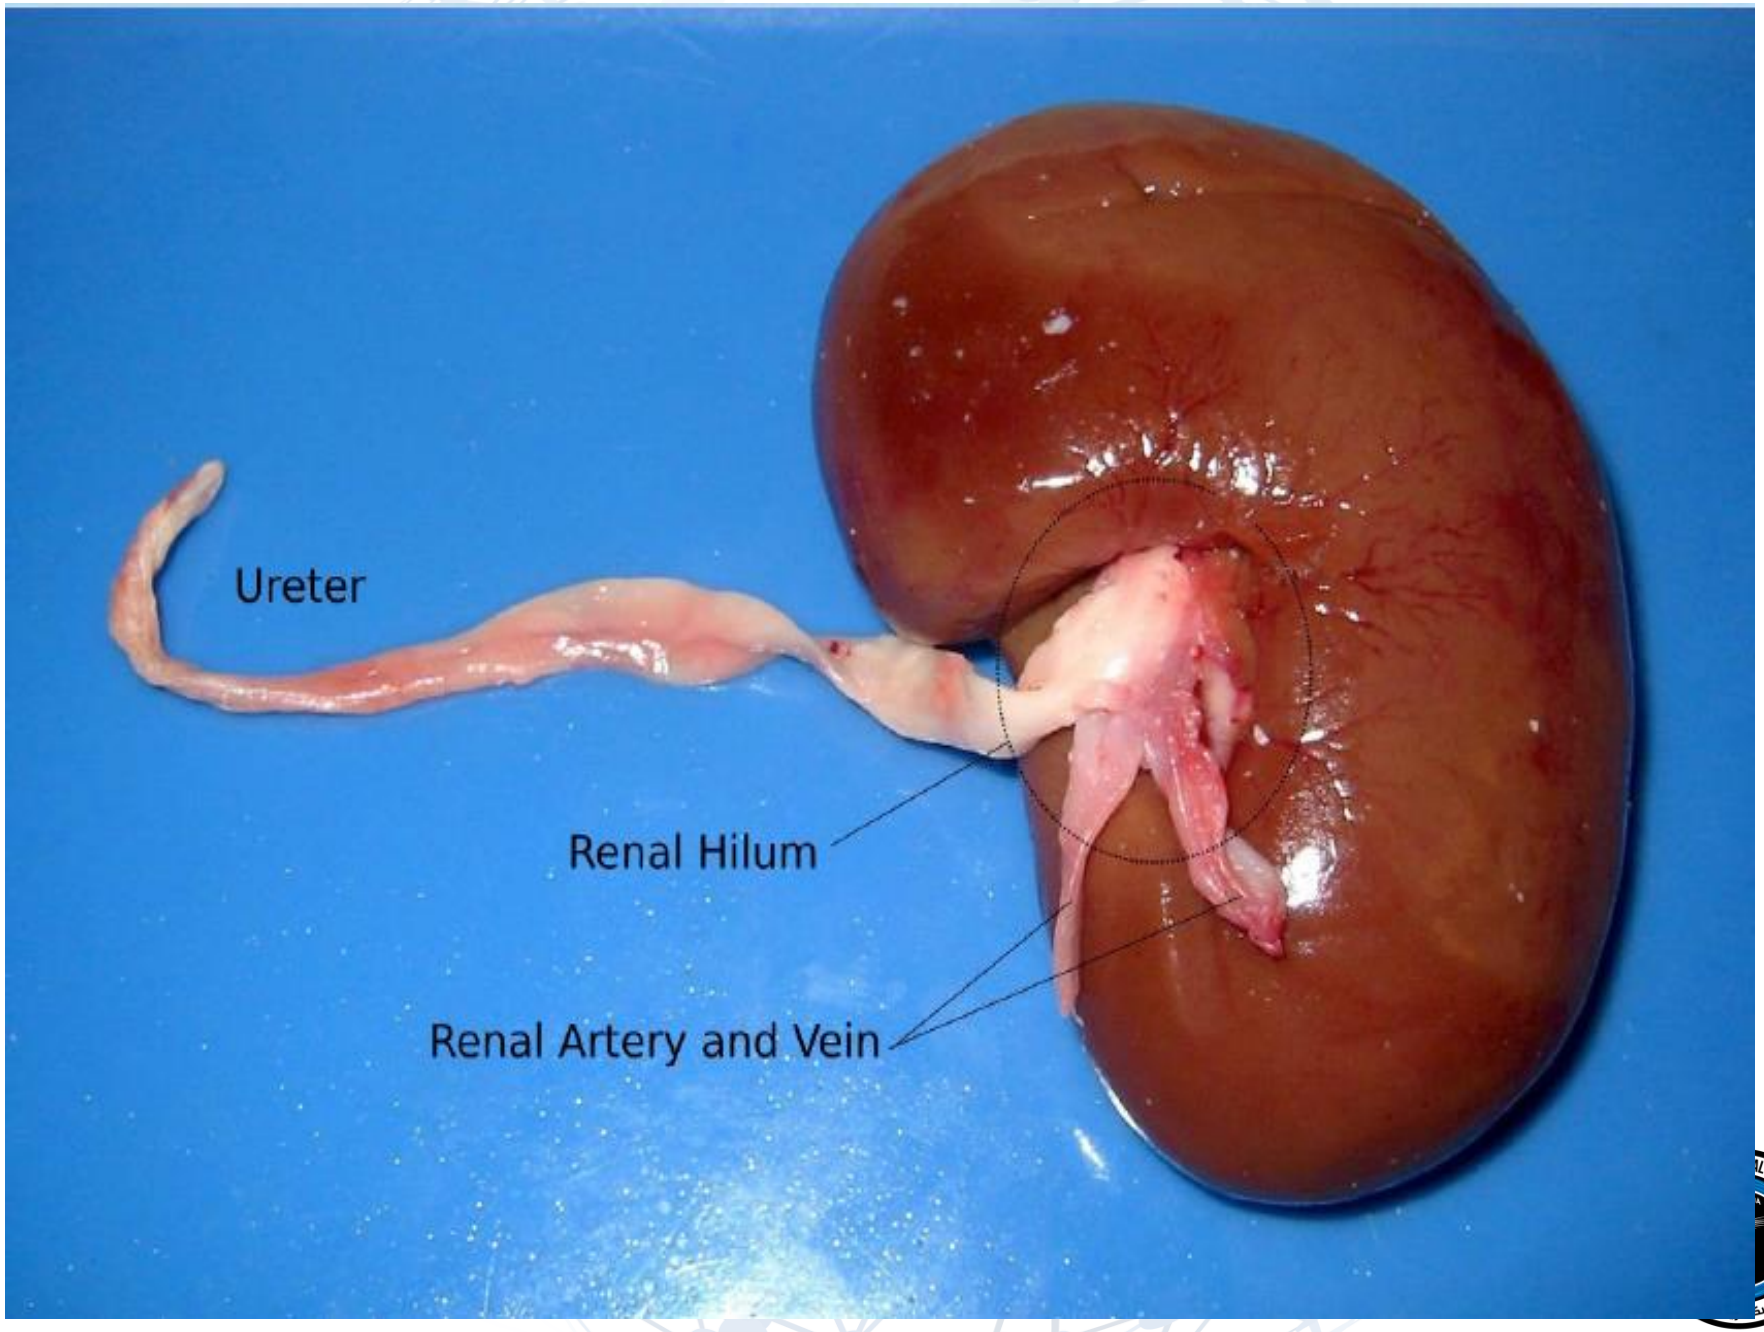

Internal structure of the kidney : The kidney is made up of an outer cortex and an inner medulla.

The cortex: the outer region of the kidney that sends the renal columns between the pyramids of the medulla.

The medulla: the inner part and is made up of renal pyramids that open into the minor calyces. The minor calyces open in major calyces that join to form the renal pelvis which is the upper part of the ureter.
