Prostate

- **Site :** below the urinary bladder around the upper part of the urethra.
- **Shape :** triangular with the base upwards close to the neck of the urinary bladder while the apex is downwards on the pelvic floor. It has 2 lateral surfaces.
- The urethra pierces the prostate and passes through it (prostatic urethra).
- The 2 ejaculatory ducts pierce the prostate to open in the prostatic urethra.
- **Function :** It secrets about 30% of the seminal fluid.

Relations of the prostate

a) Anteriorly : fat in the retropubic space.

b) Posteriorly : rectum.

c) Laterally : levator ani muscle (pelvic floor).

- Prostatic ducts : transmit the prostatic secretions and open in the prostatic urethra.
