Piriformis

- Origin : anterior surface of the middle 3 pieces of sacrum.
- Insertion : The muscle passes through the greater sciatic foramen to be inserted into the greater trochanter of the femur.

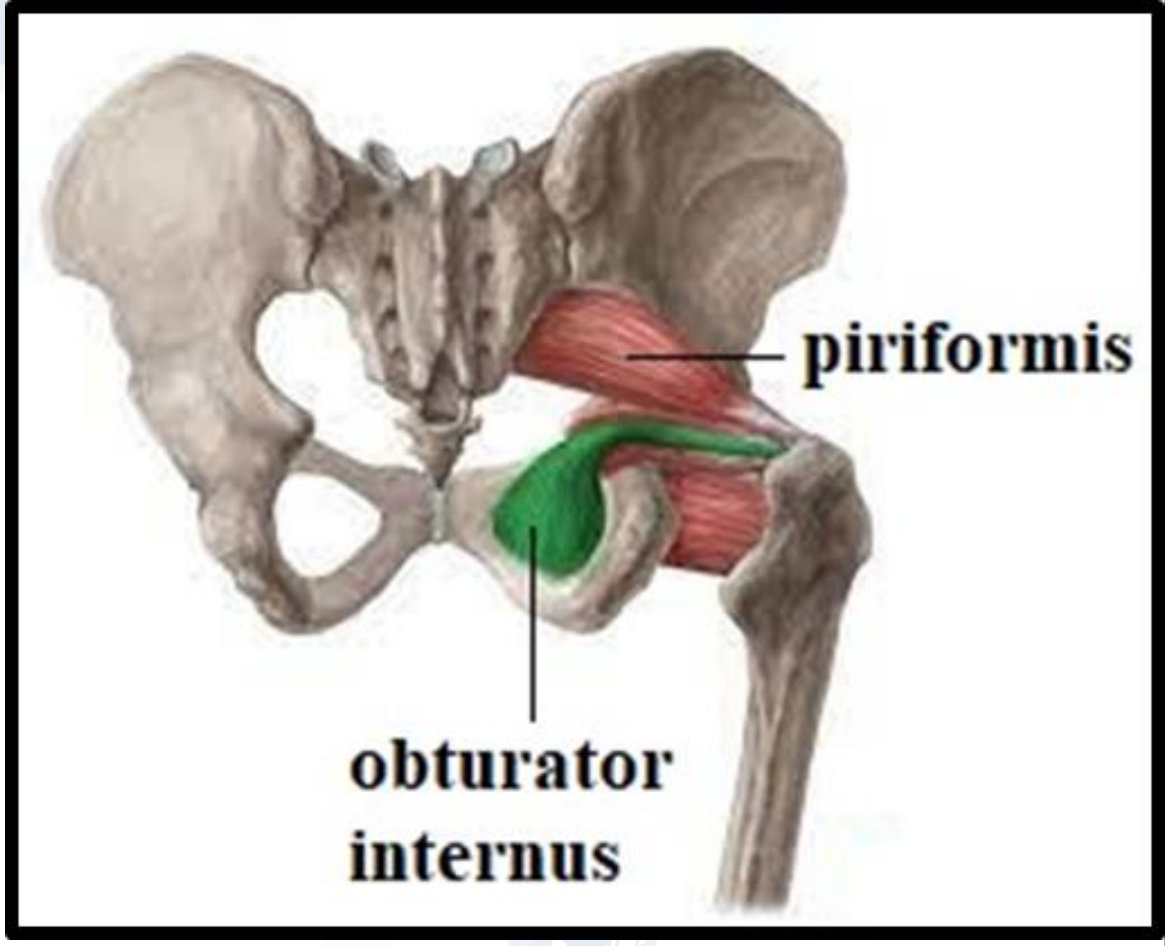

- Nerve supply : Sacral plexus (S1,2).
- Action : lateral rotation of thigh.

Obturator internus

- Origin : inner side of obturator membrane and the bone around obturator foramen.
- Insertion : The muscle passes through the lesser sciatic foramen to be inserted into the greater trochanter of the femur.

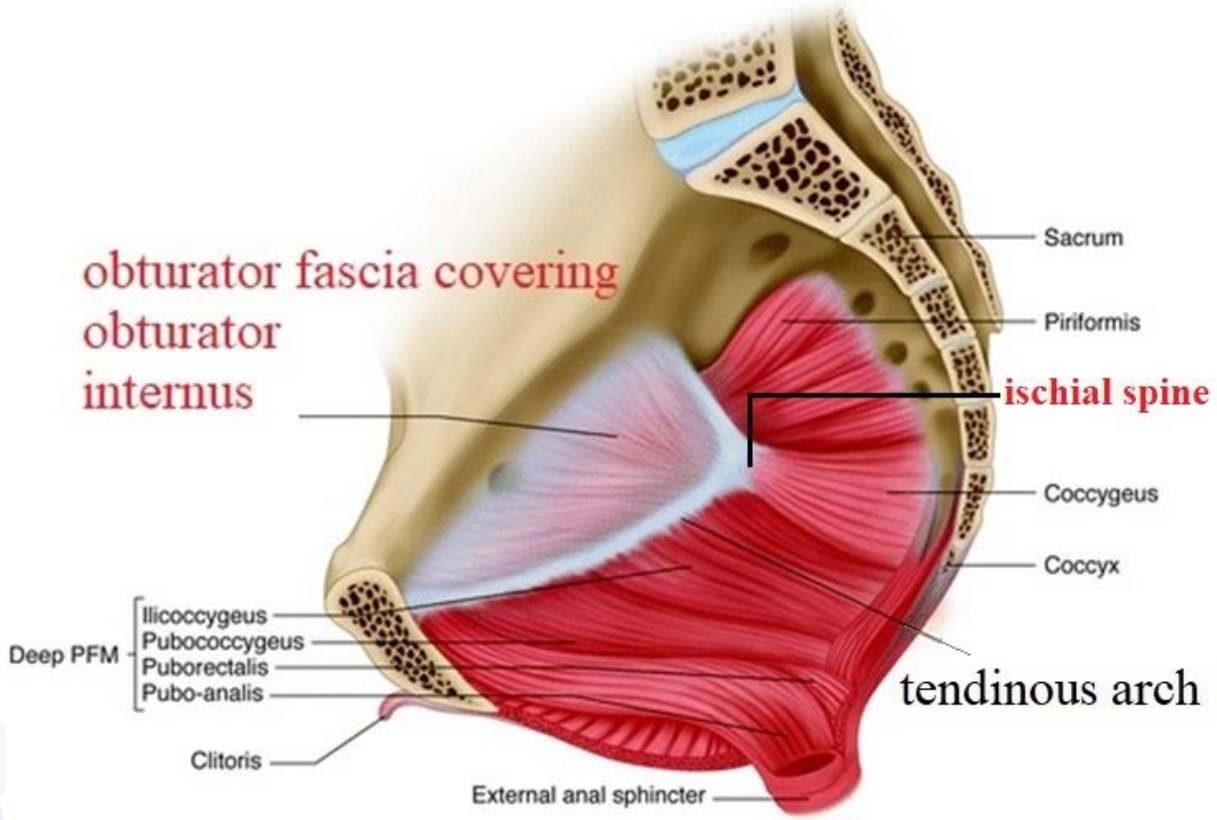

- Nerve supply : nerve to obturator internus.
- Action : lateral rotation of thigh.

ALEXANDRIA NATIONAL UNIVERSITY
ANU MEDICAL SCHOOL PROGRAM

Obturator fascia

- It covers the inner surface of the obturator internus muscle.

- It is thickened giving the tendinous arch that gives origin to the levator ani muscle.
