Pelvic floor

- It separates the pelvic cavity above from the perineum below. It slopes inferiorly and medially.
- It is formed of levator ani and coccygeus muscles on both sides.
- Levator ani muscles form the anterior part.
- Coccygeus muscles form the posterior part.

ANU MEDICAL SCHOOL PROGRAM

Levator ani

- The anterior part of the pelvic floor.

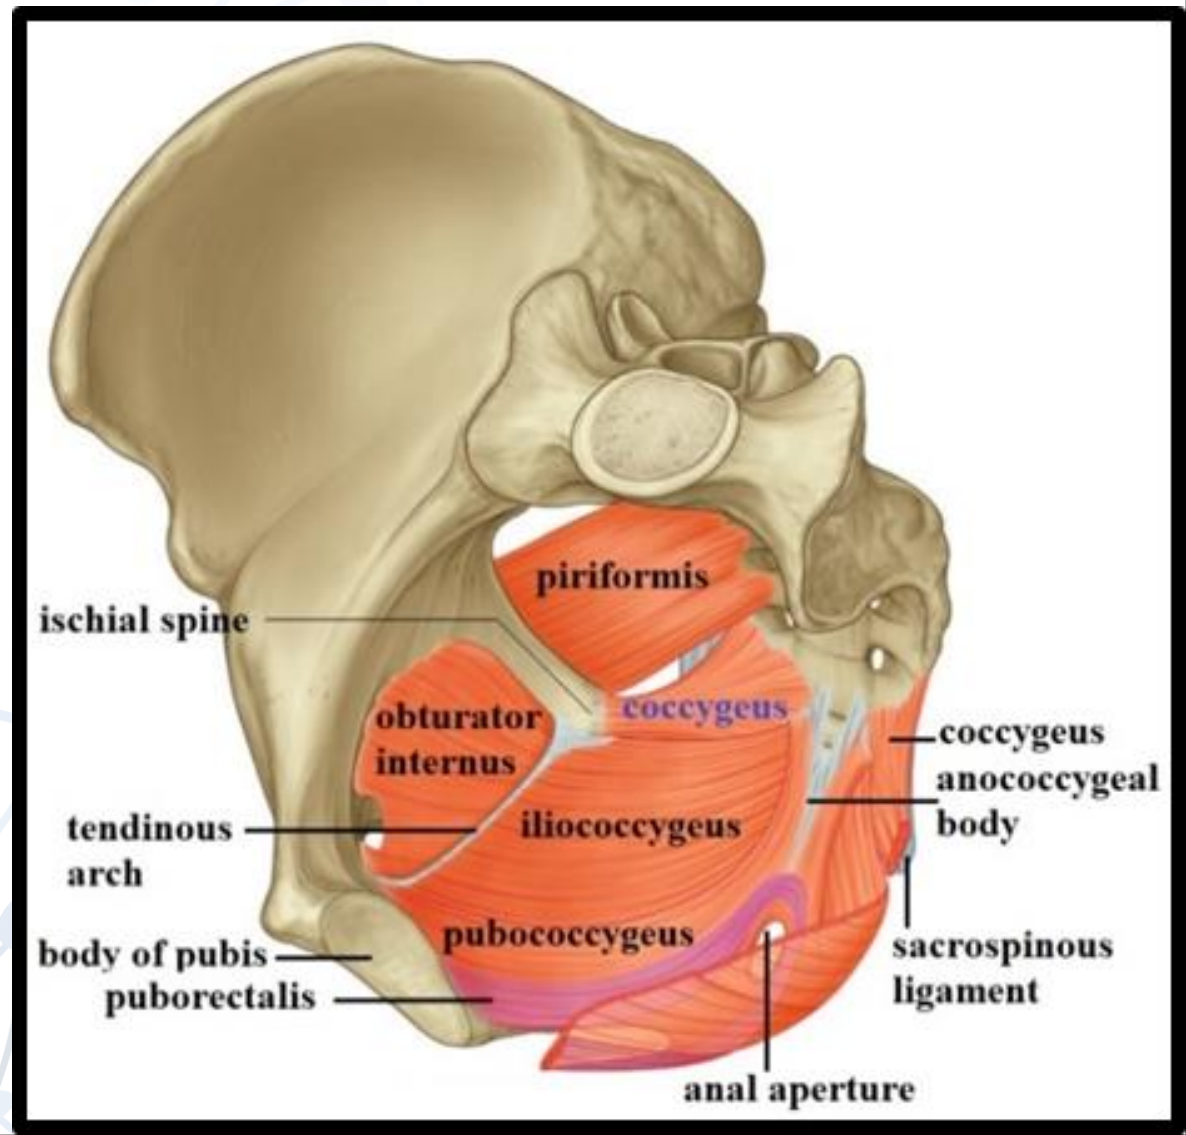

- Origin : body of the pubic bone, tendinous arch (linear thickening of the obturator fascia) and ischial spine.

- Insertion : the muscle is divided into 3 parts :

1- puborectalis.

2- pubococcygeus.

3- ischiococcygeus.

Levator ani

- Puborectalis :
- It forms a U-shaped sling with its opposite side around the anorectal junction.
