Lrvator ani

Nerve supply : S2,3,4.

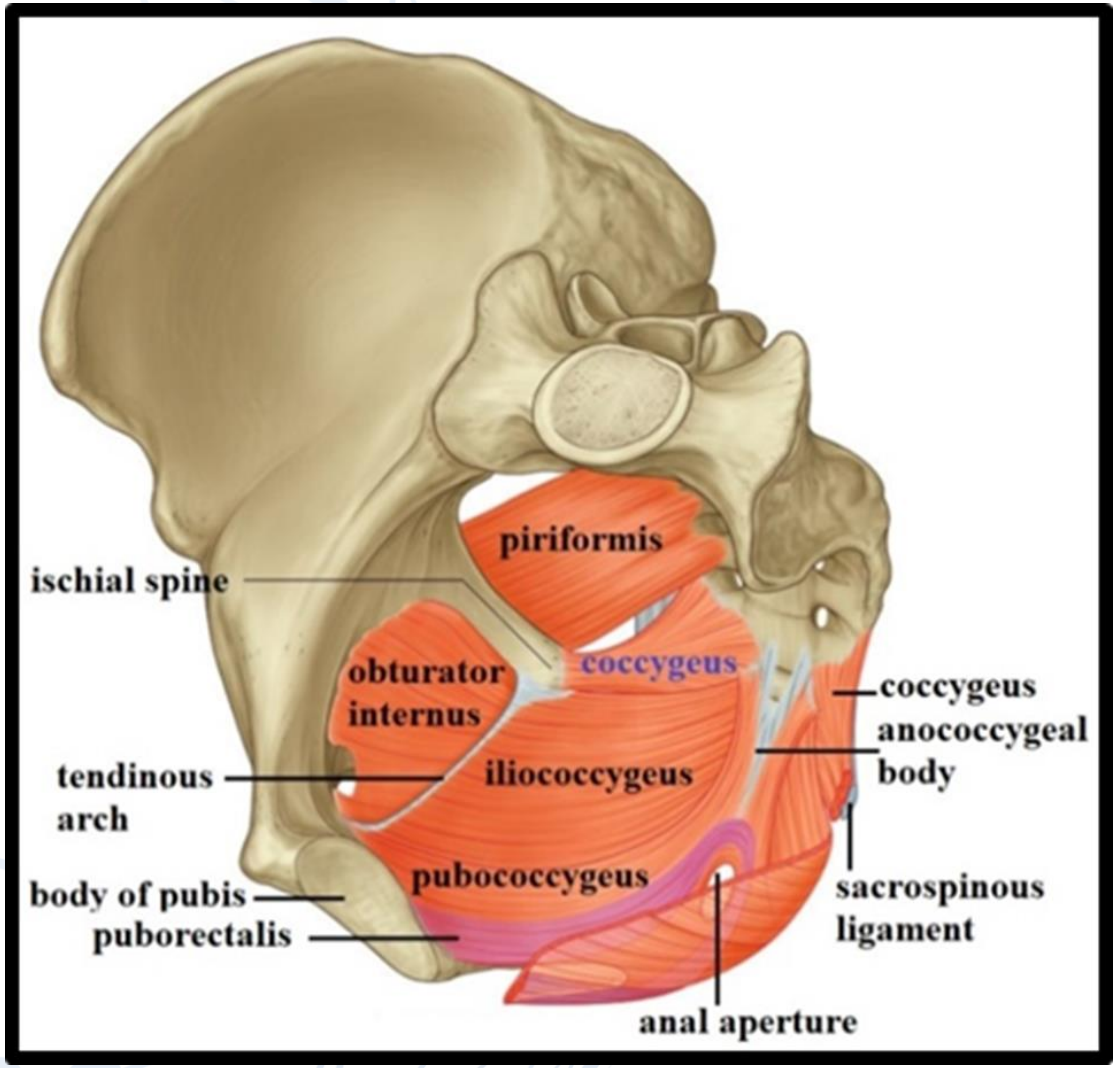

Action :

1- support of the pelvic viscera (during forced acts).

2- puborectalis maintains the anorectal angle. So, it must relax during defecation.

3- it acts as a sphincter of the vagina in females.

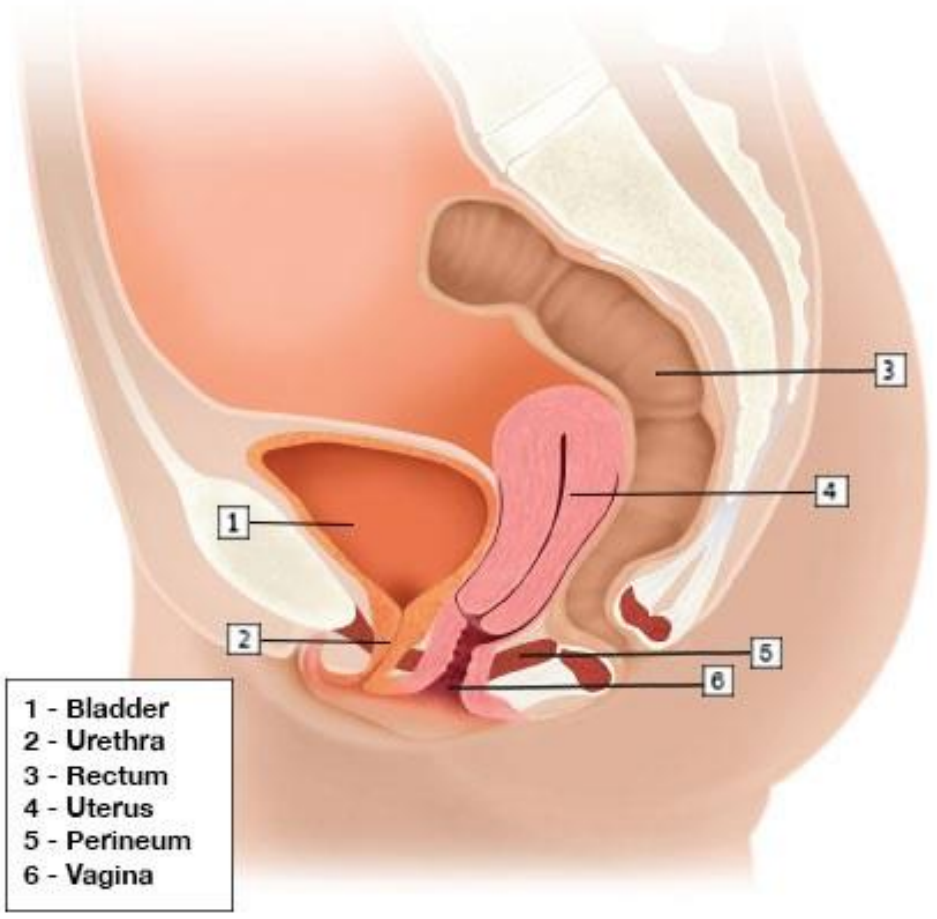

4- it reinforces the anal sphincters.

ANU MEDICAL SCHOOL PROGRAM

Clinical notes

- During labor, the perineal body may be torn and the levaator ani muscles are affected with weakness of the pelvic floor and loss of support of the pelvic viscera.
- This may lead to prolapse of the uterus.

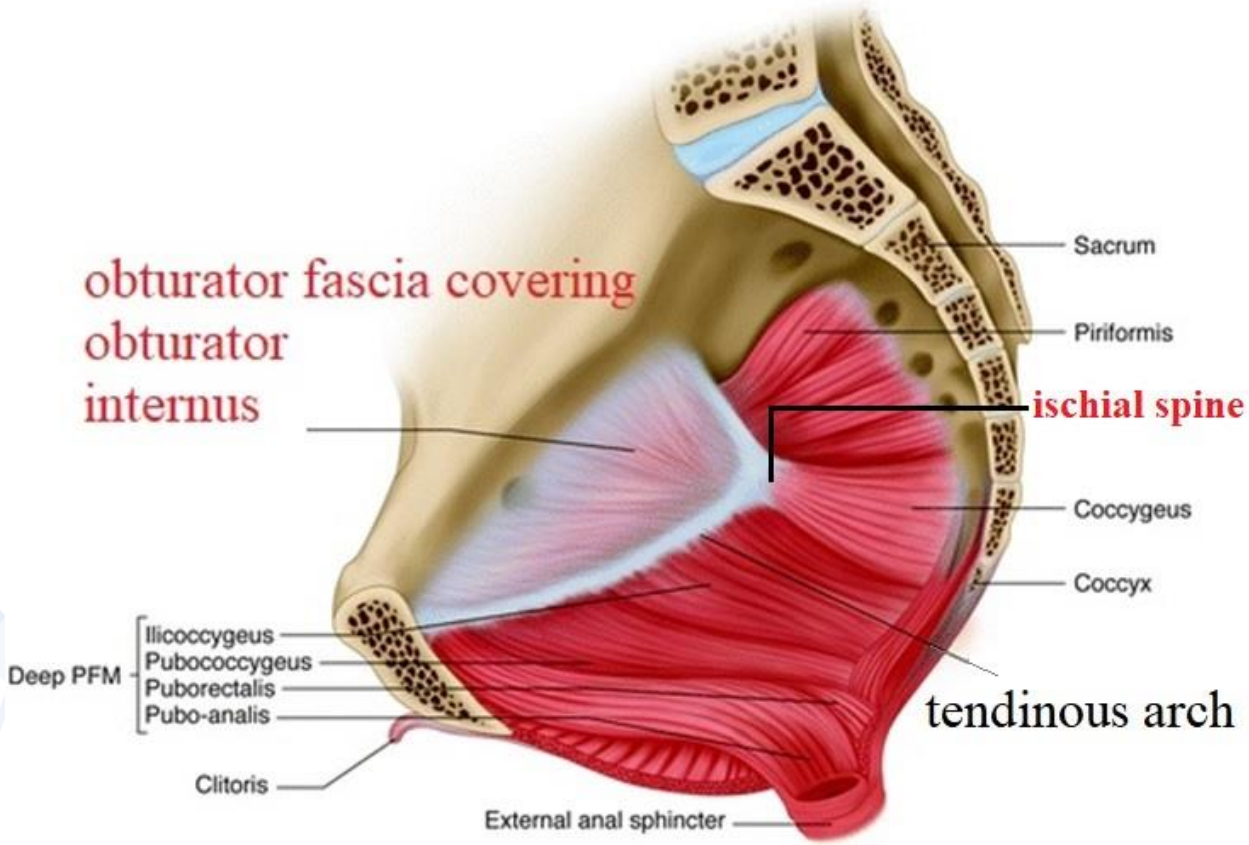

Coccygeus

- The posterior part of the pelvic floor.
- It represents the inner side of the sacrospinous ligament.

- Origin : ischial spine.

- Insertion : last 2 pieces of the sacrum and first piece of the coccyx.
