Female reproductive system II

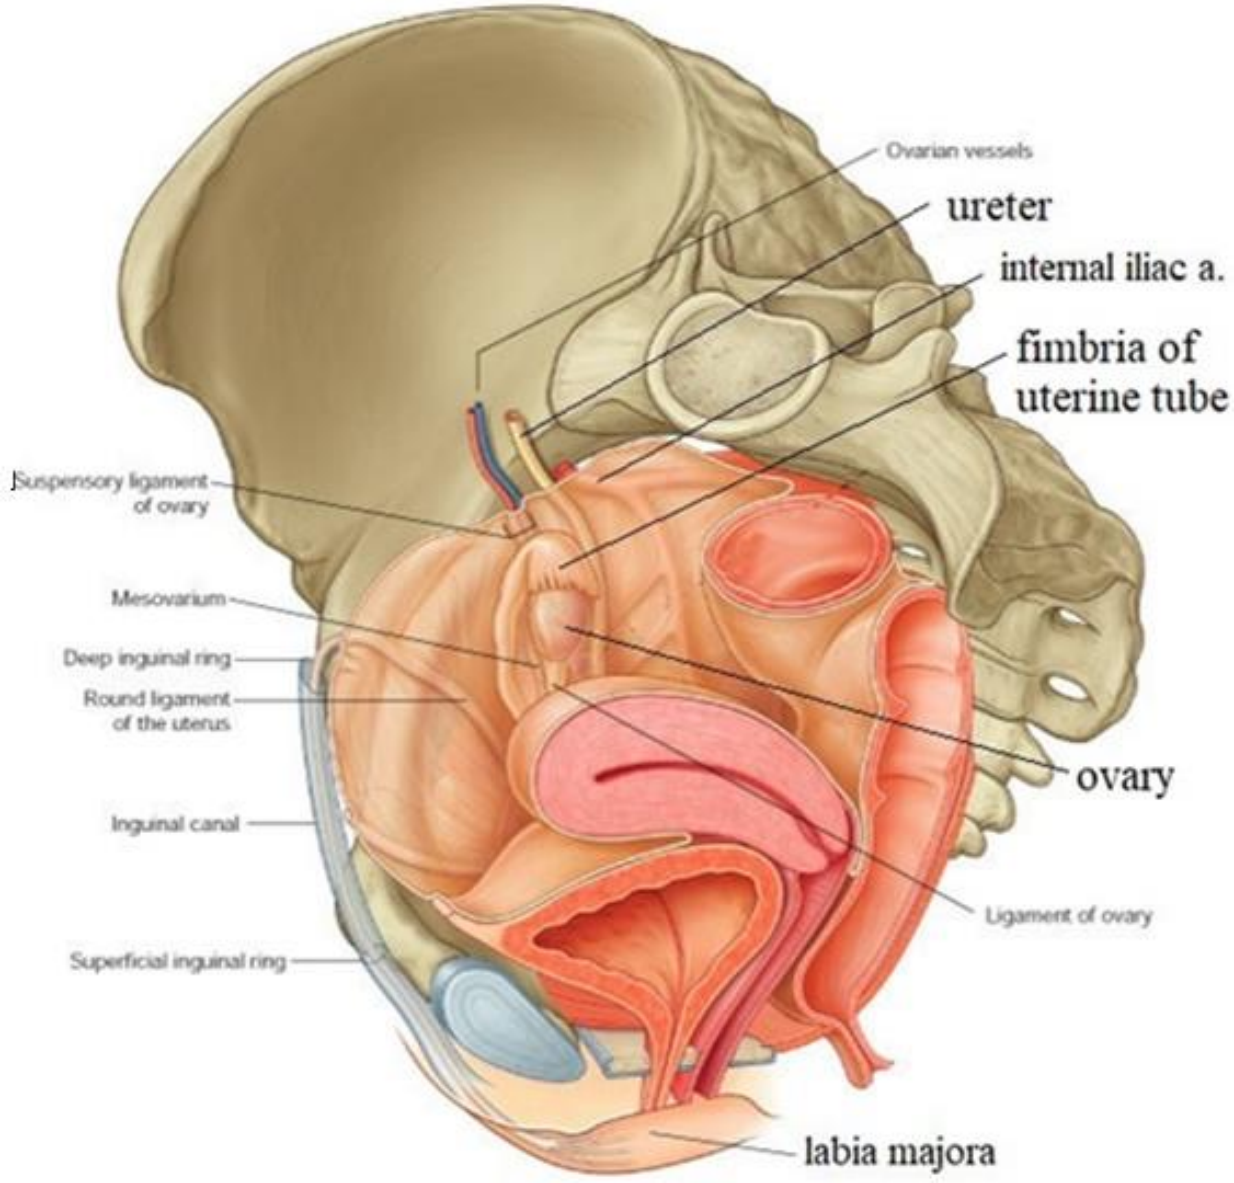

Prof. Dr. Abdelghany Hassan Abdelghany
Professor of Anatomy and Embryology
Faculty of Medicine, Alexandria University

ANU MEDICAL SCHOOL PROGRAM

Ovary

- **Site :** a pelvic organ located in a depression, the ovarian fossa, on the lateral pelvic wall. It is attached to the broad ligament by the mesovarium.

- **Size and shape :** It is about the size and shape of an almond (3 cm length x 2 cm width x 1cm thickness).

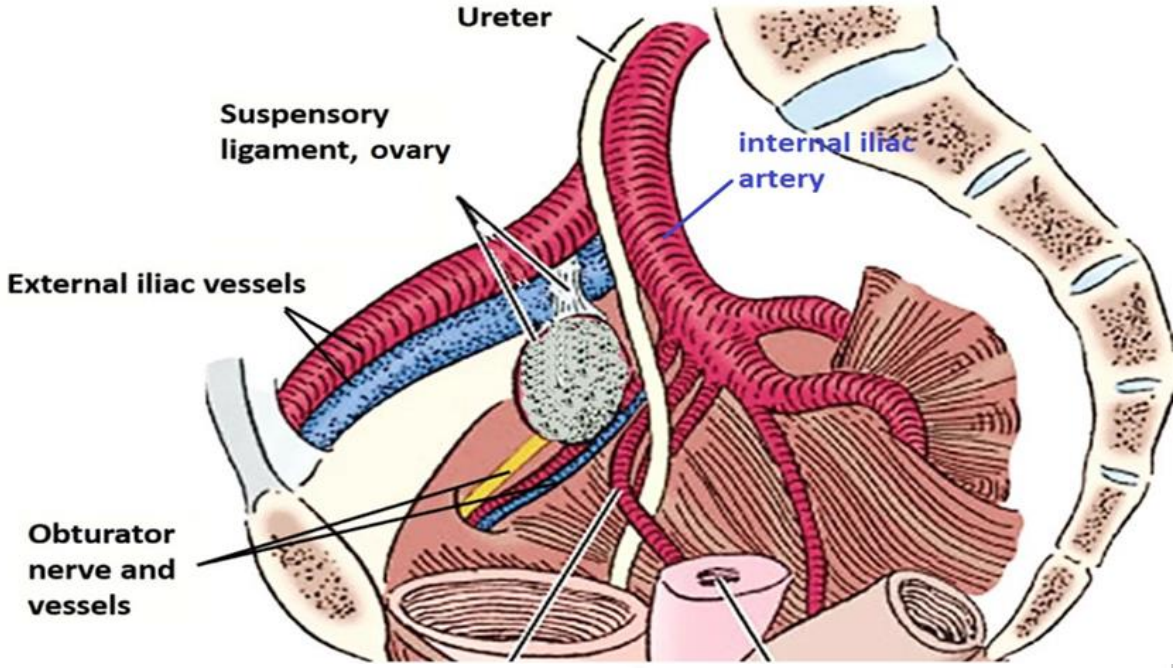

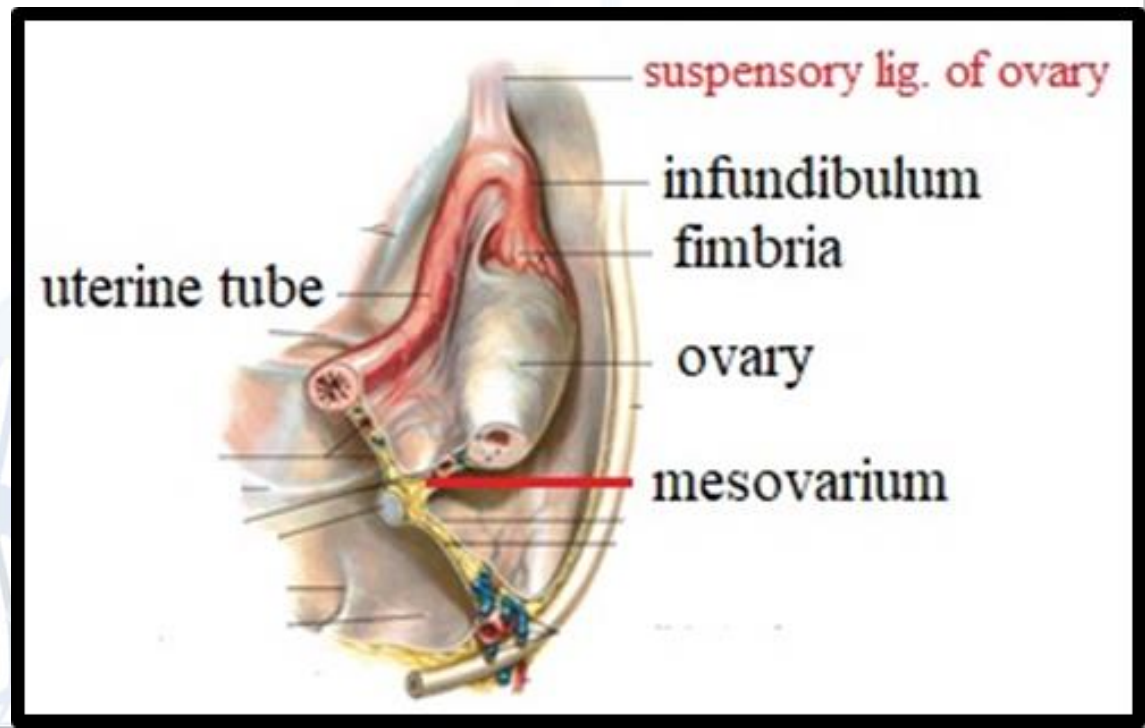

Ovary

- **Boundaries of ovarian fossa :**

- Posteriorly : ureter and internal iliac artery.
- Laterally : obturator nerve and vessels.

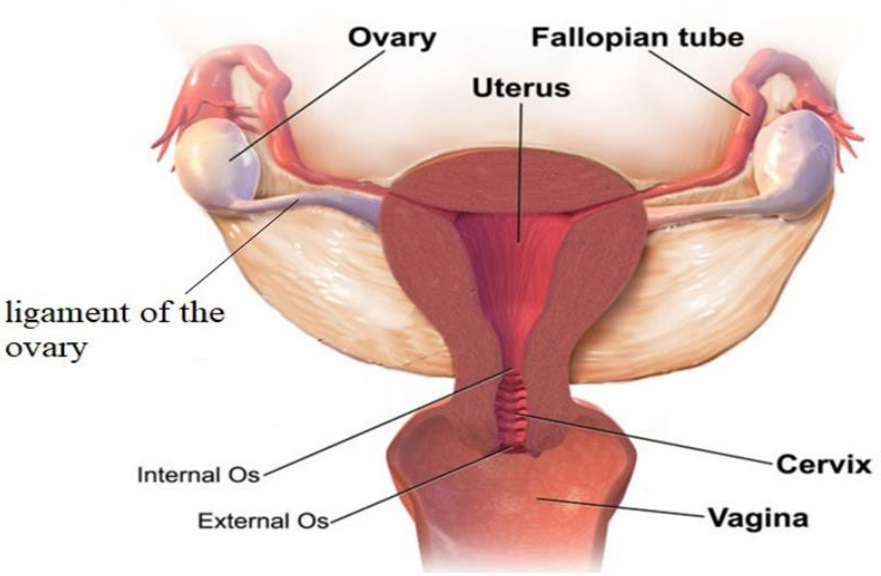

- It has 2 surfaces :
- Lateral surface : related to the lateral pelvic wall, obturator nerves and vessels.
- Medial surface : covered partly with fimbriated end of the uterine tube

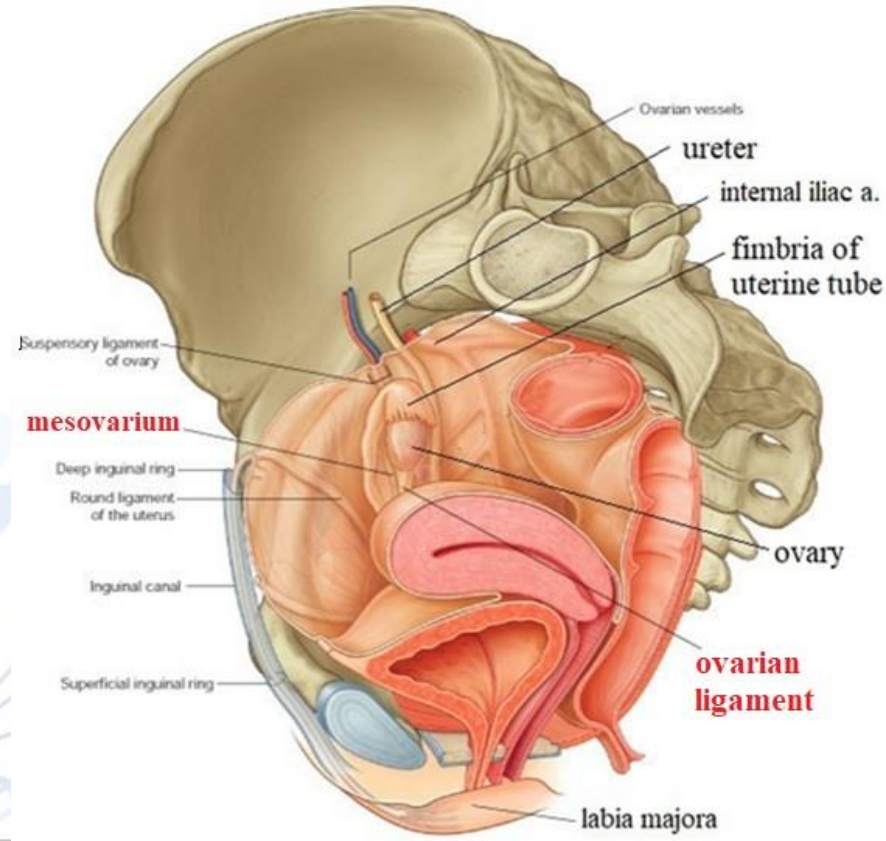

Ovary

- It has 2 borders :
- Anterior border : attached to the mesovarium.
- Posterior border : free.
- It has 2 ends :
- Tubal (upper) end : attached to fimbria of the uterine tube and suspensory ligament of the ovary.
- Uterine (lower) end : attached to the lateral angle of the uterus by the ligament of the ovary below and behind the opening of the uterine tube.

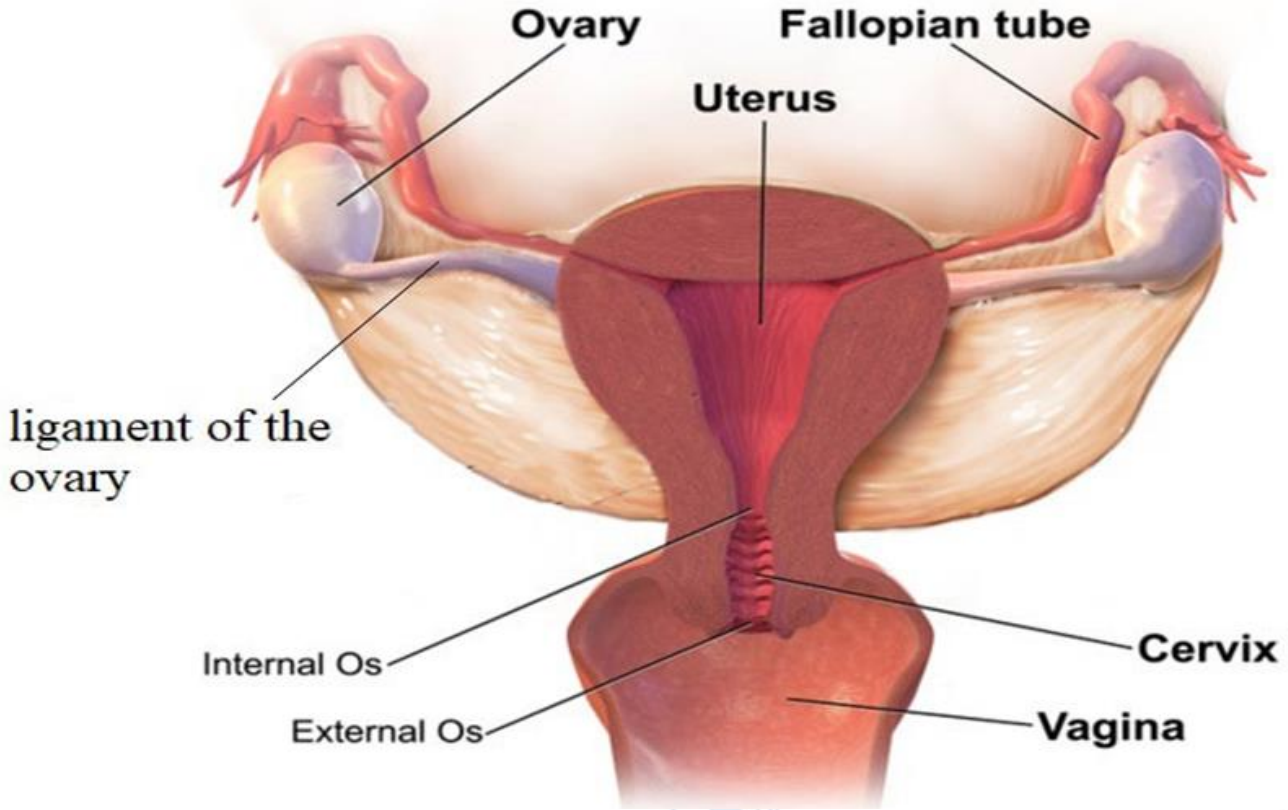

Ovary

- It has 2 ends :
- Tubal (upper) end : attached to fimbria of the uterine tube and suspensory ligament of the ovary.

- Uterine (lower) end : attached to the lateral angle of the uterus by the ligament of the ovary below and behind the opening of the uterine tube.
