Female external genitalia

- 2 lateral folds called labia majora.
- 2 medial folds called labia minora.
- A protrusion called clitoris.
- Vestibule of the vagina is the space between the 2 labia minora where the urethra, vagina and ducts of greater vestibular glands open.

Greater vestibular glands

- They are pea-shaped mucous glands that lie deep to the labia majora.

- Their ducts open in the vestibule of the vagina lateral to the vaginal orifice.

- **Function :** they produce secretion during sexual arousal.

- Clinical notes : infection of these glands leads to ‘Bartholin Abscess’.
