Sacral plexus

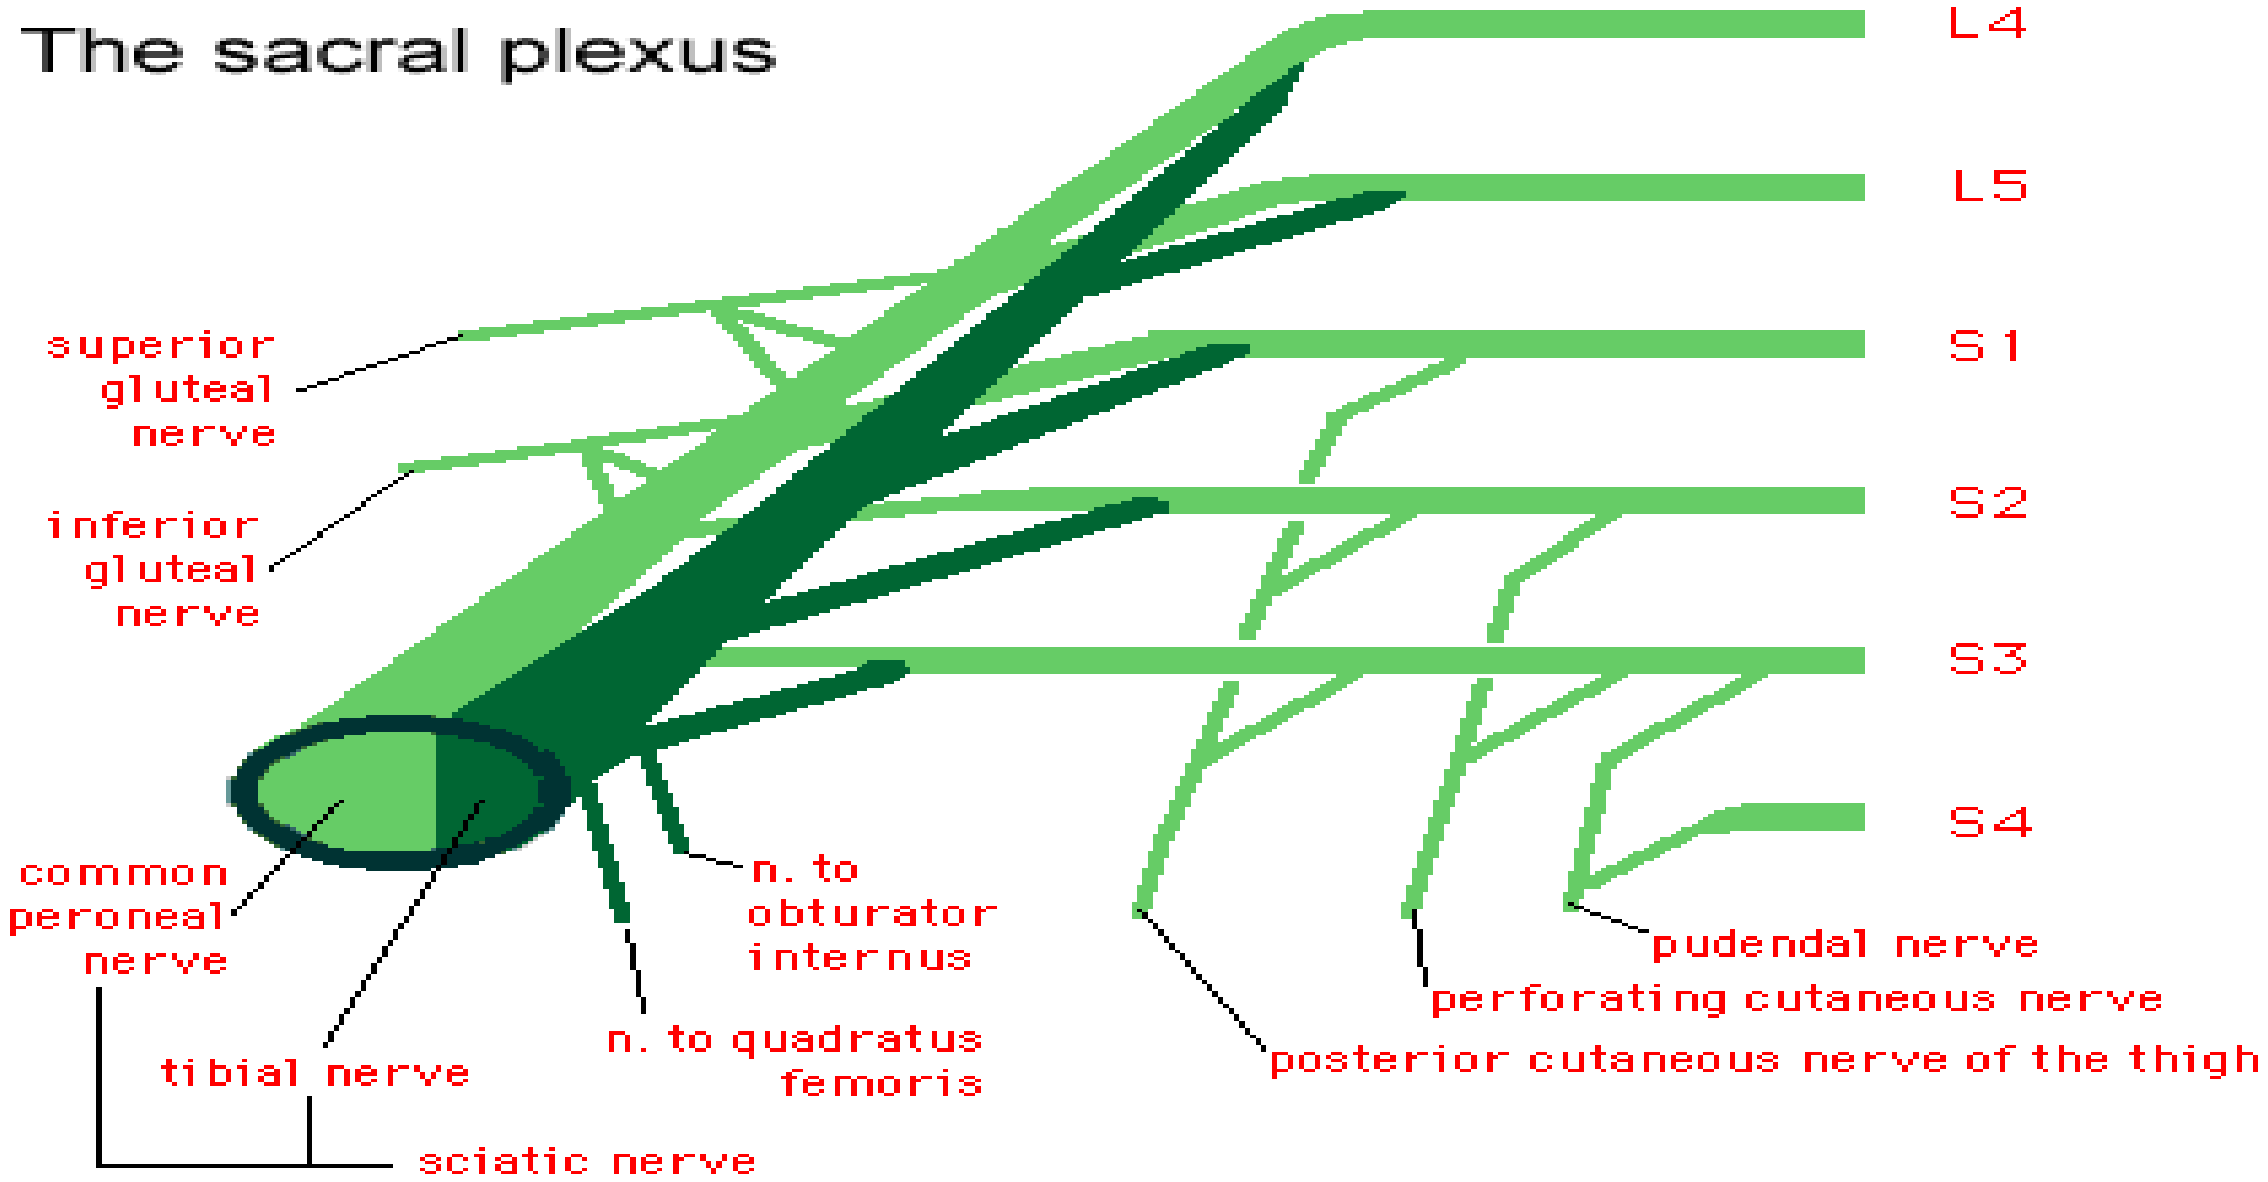

- Formation : ventral rami of L4,5 and S1,2,3,4.

- **L4 and L5 join to form the lumbosacral trunk that joins the sacral plexus.**

- Site : in front of the piriformis muscle.

The sacral plexus

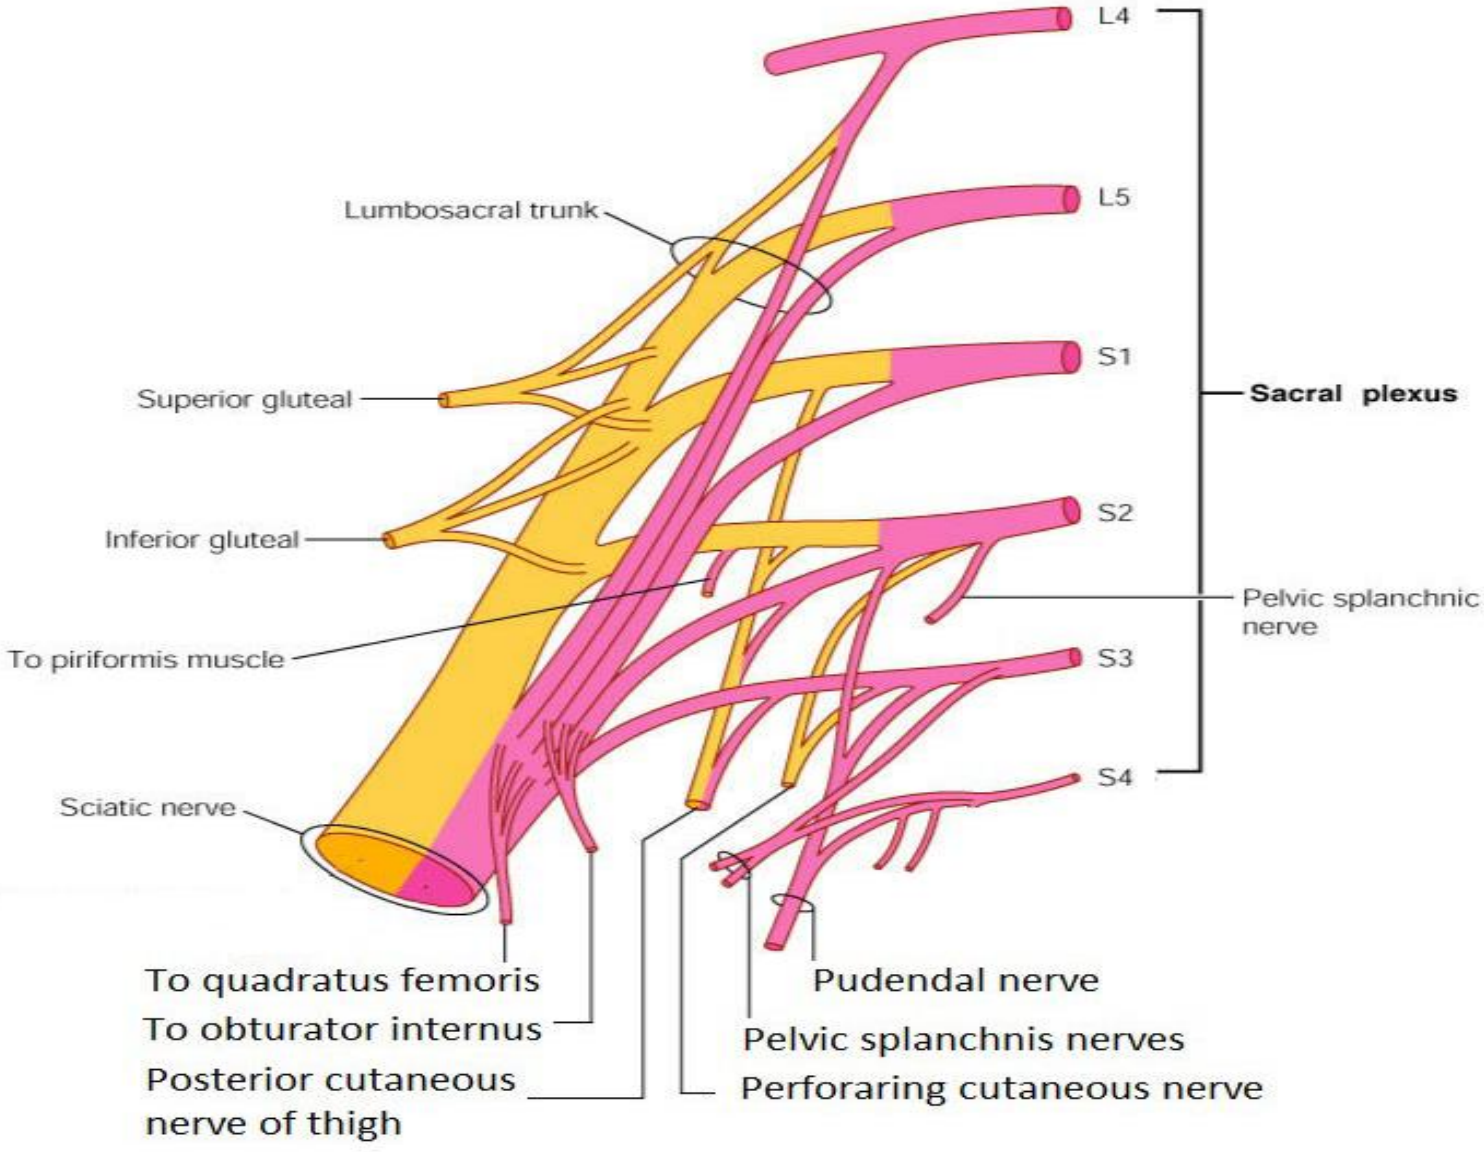

Sacral plexus

A- Pelvic splanchnic nerves (S2,3,4)
parasympathetic fibers to the pelvic viscera.

B- Branches to the pelvic muscles :

- Nerve to the piriformis muscle.

Sacral plexus

C- Branches to the lower limb : they pass through the greater sciatic foramen to the gluteal region.

1- Sciatic nerve.

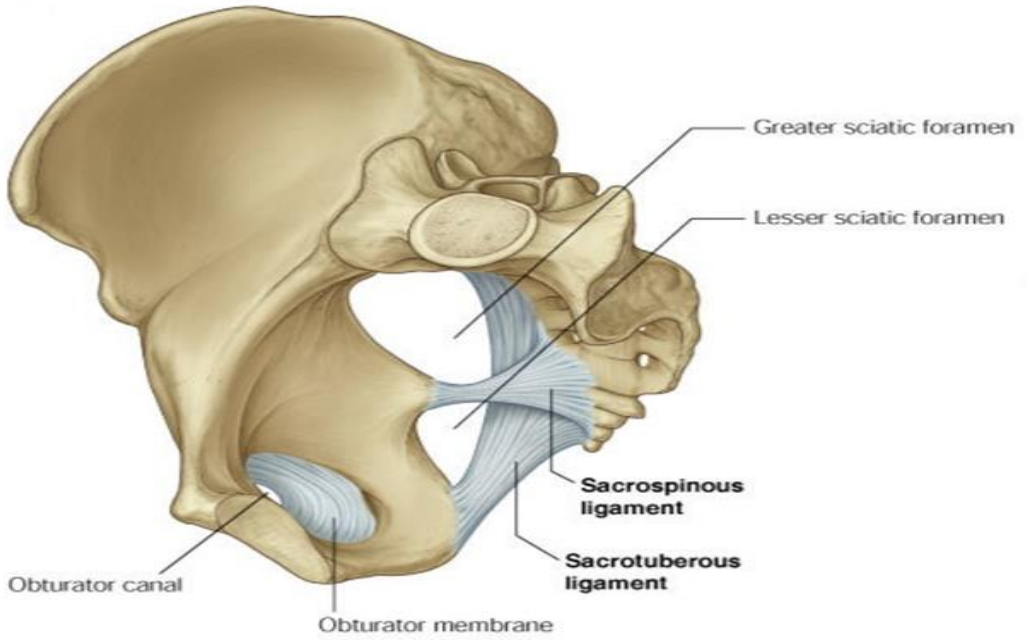

2- Superior gluteal nerve.

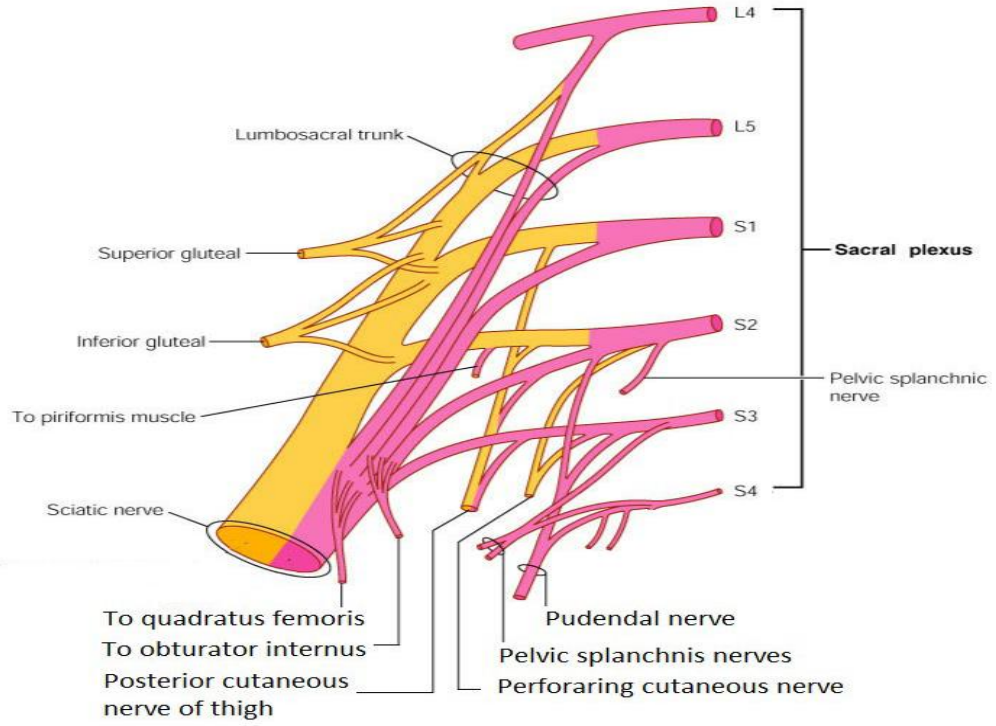

3- Inferior gluteal nerve.

4- Nerve to quadratus femoris muscle.

5- Posterior cutaneous nerve of thigh.

6- Perforating cutaneous nerve.

Sacral plexus

D- Branches to the Perineum : they pass through the greater sciatic foramen to the gluteal region then through the lesser sciatic foramen to the perineum.

1- Pudendal nerve.

2- Nerve to obturator internus muscle.

N.B. Sciatic and pudendal nerves are considered the 2 terminal branches of the sacral plexus.
