Blood supply of the penis

- **Arteries of the penis :** they are branches of the internal pudendal artery.

1- Dorsal artery (2 in number) that lie on the dorsum of the penis.

2- Deep artery (2 in number) that lie in the corpus cavernosum.

3- Artery of the bulb (2 in number) that lie in the corpus spongiosum.

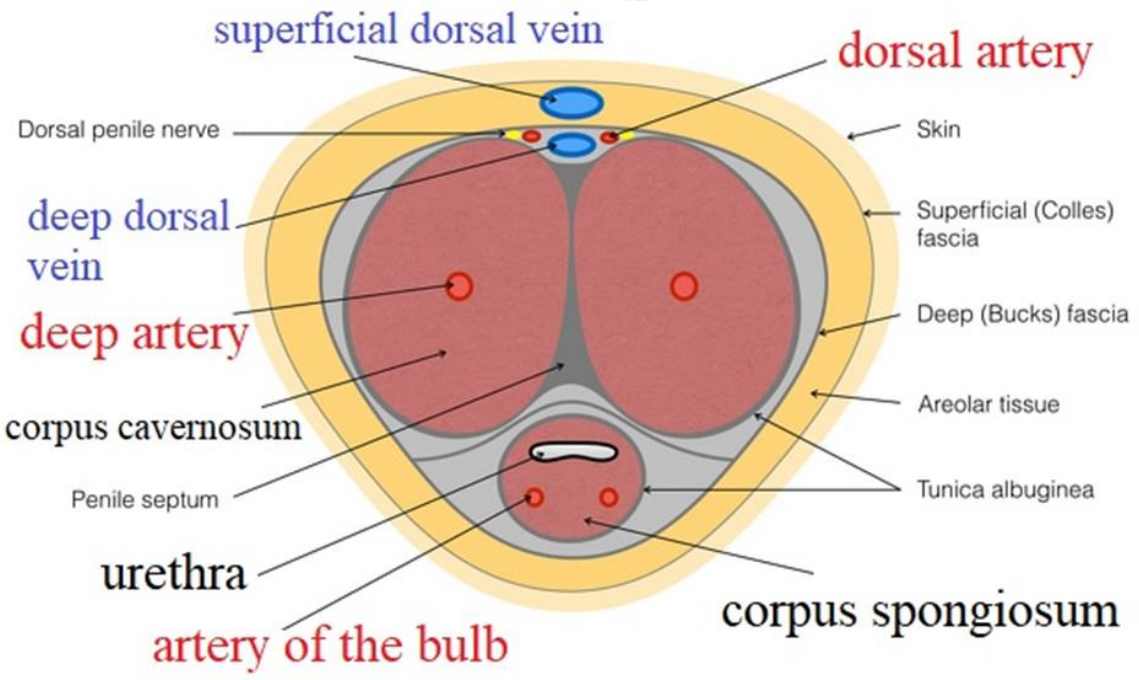

Blood supply of the penis

-Veins of the penis :

- Superficial dorsal vein that drains into the great saphenous vein.
- Deep dorsal vein that drains into the prostatic venous plexus.

- Lymphatic drainage of the penis : superficial inguinal lymph nodes.

Test your self

- True or false :

1. Vas deferens lies lateral to the seminal vesicle on the base of urinary bladder. **F**

2- Left testicular vein drains into inferior vena cava. **F**

3- Posterior lobe of the prostate lies above the ejaculatory ducts. **F**

4- Corpus spongiosum is connected to the bulb of penis. **T**

Test your self

- Which prostatic lobe is most glandular?

A. Anterior.
B. Posterior.
C. Median.
D. Right.
