Perineal membrane (inferior fascia of urogenital diaphragm)

- It is a fibrous sheet between the superficial and deep perineal pouches.
- It is attached laterally to the pubic arch.
- Its anterior border is thickened to form the transverse perineal ligament which is separated from the lower border of the symphysis pubis by a space transmitting the deep dorsal vein of the penis or clitoris.
- Its posterior border is attached to the superior fascia of the urogenital diaphragm and Colle's fascia.

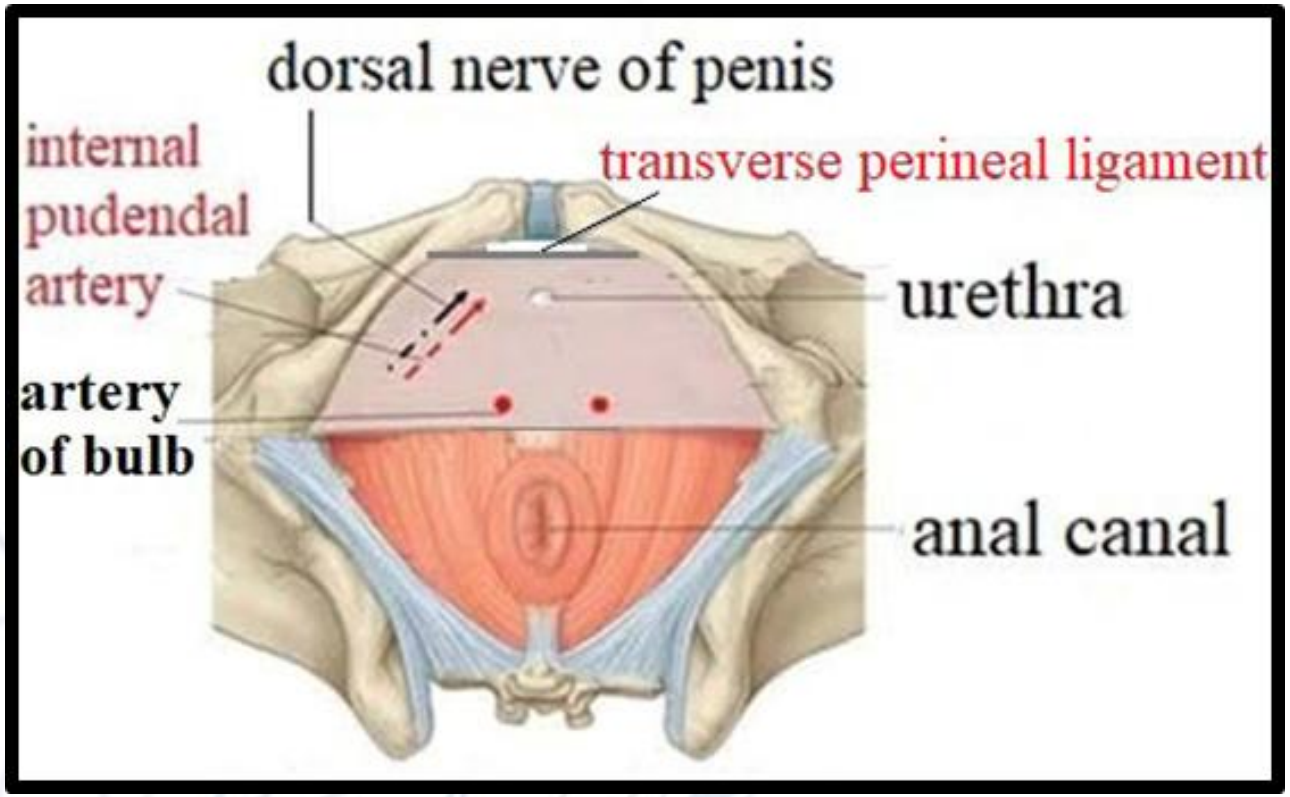

ANU MEDICAL SCHOOL PROGRAM

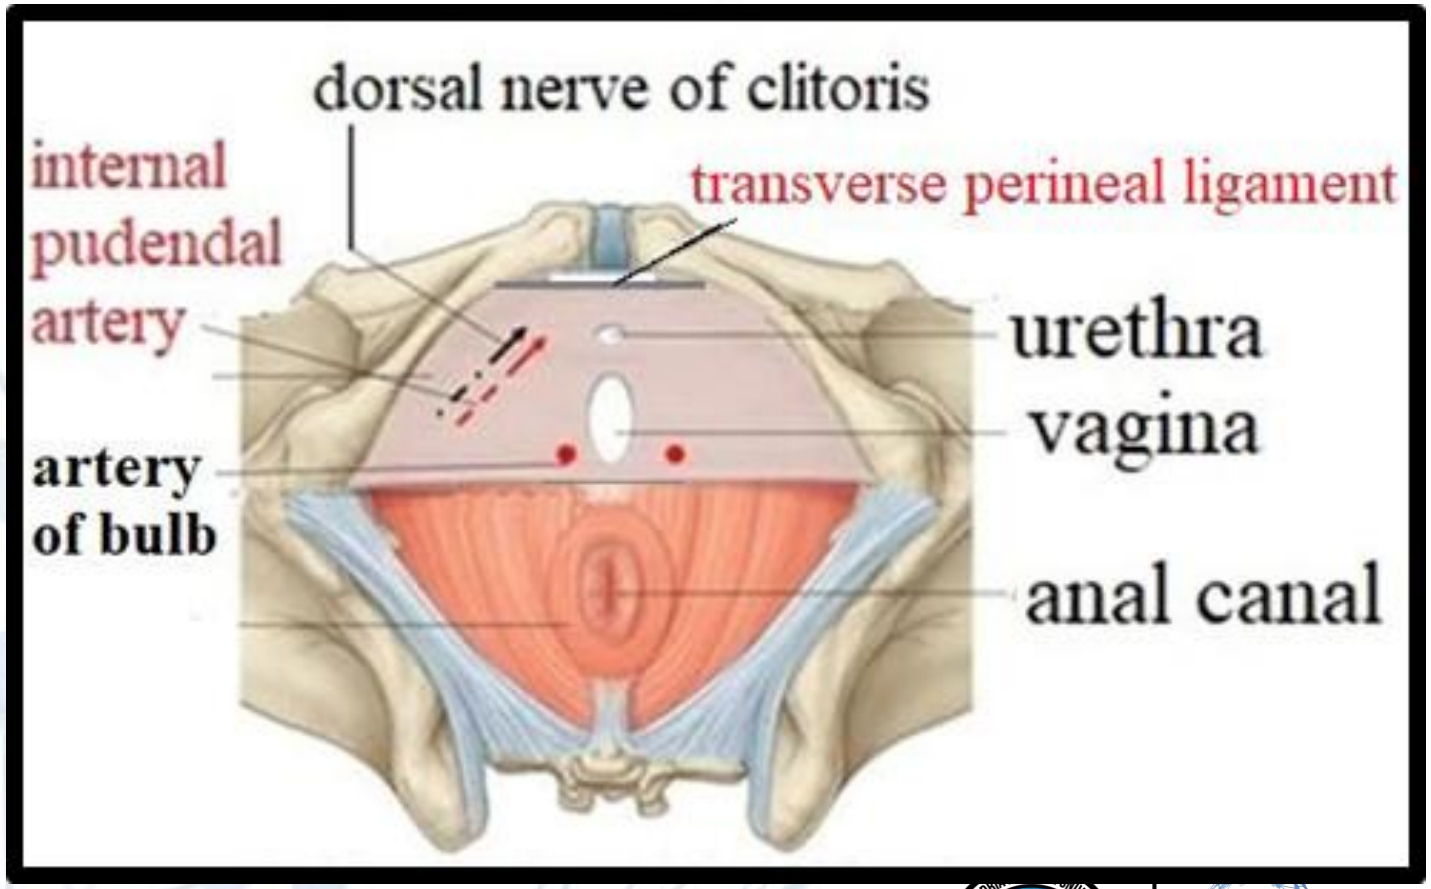

Structures piercing the perineal membrane in males

1. Urethra.
2. Ducts of bulbo-urethral glands.
3. Internal pudendal arteries.
4. Arteries of the bulb.
5. Dorsal nerves of penis.

Structures piercing the perineal membrane in females

1. Urethra.
2. vagina.
3. Internal pudendal arteries.
4. Arteries of the bulb.
5. Dorsal nerves of the clitoris.
