Pelvic inlet

- It is bounded by the symphysis pubis anteriorly, pubic crest, pubic tubercle, pectineal line, arcuate line and ala of sacrum on each side and posteriorly by the promontory of sacrum.

Pelvic outlet

- It is bounded by the inferior surface of symphysis pubis, pubic arch, ischial tuberosities, sacrotuberous ligaments and tip of the coccyx.

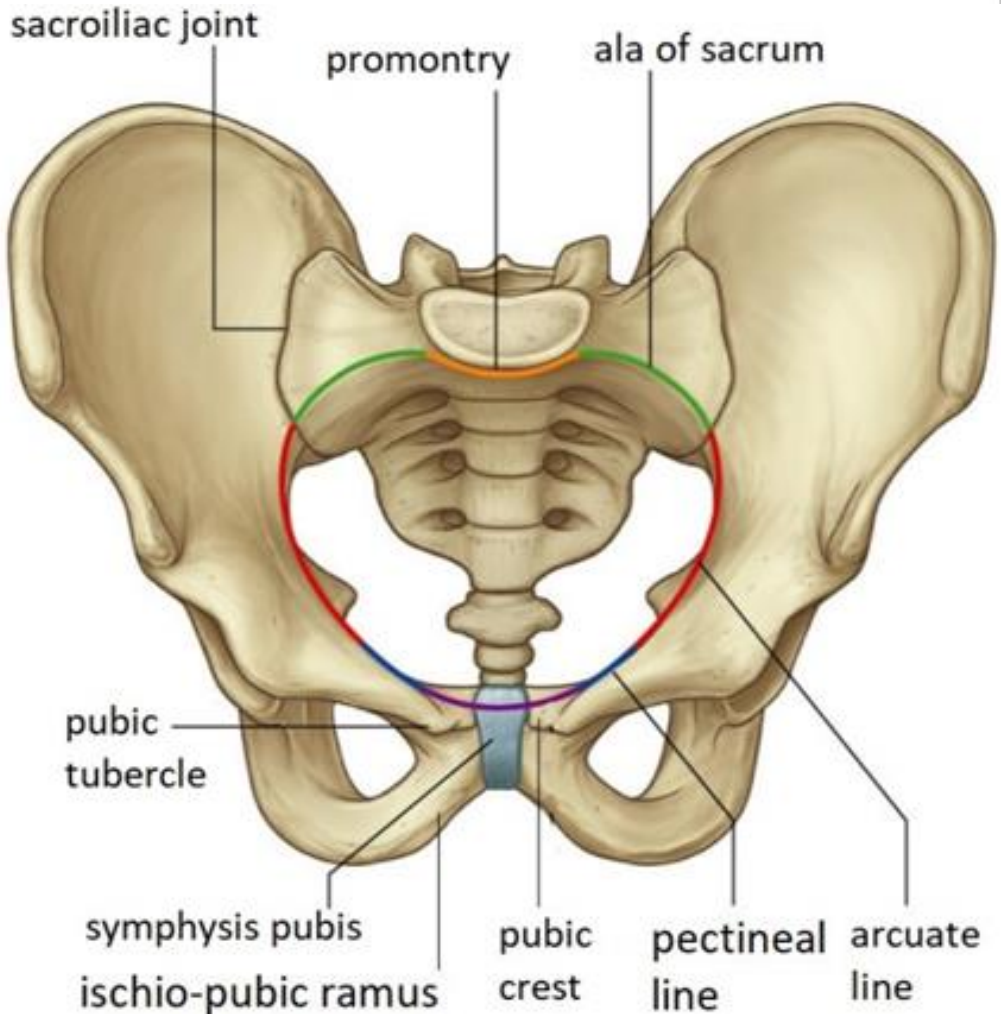

Divisions of the pelvis

- The pelvis is divided into :

1. Greater (false) pelvis : that lies above the pelvic inlet and it contains abdominal viscera.

2. Lesser (true) pelvis : that lies between the pelvic inlet and outlet. It contains viscera of the pelvis and perineume promontory of sacrum.

Anatomical position of the pelvis

- The pubic tubercles and anterior superior iliac spines lie on the same vertical plane.
