Perineal body

- It is a fibro-muscular mass attached to the posterior border of the perineal membrane.

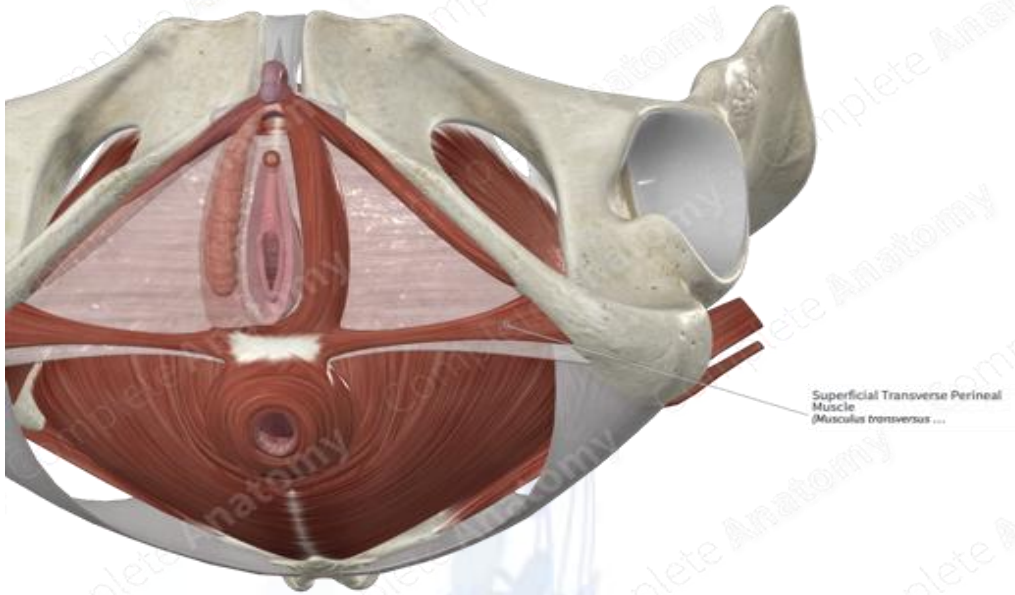

- It lies between the openings of the vagina and anal canal.

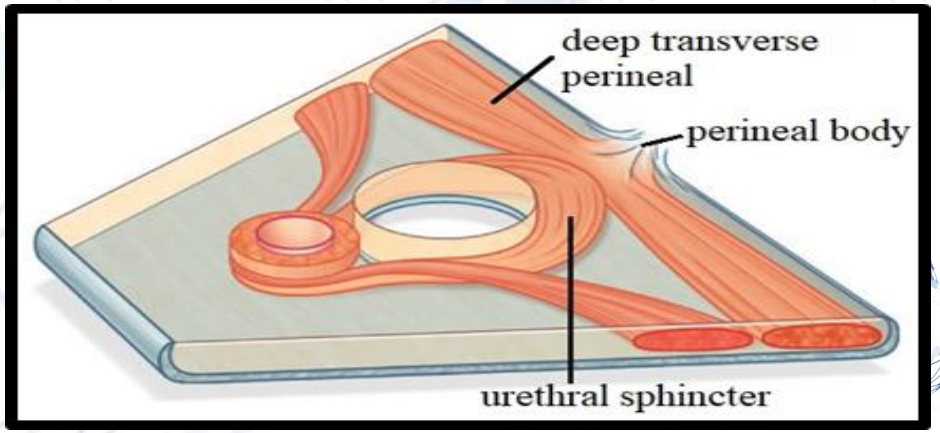

Perineal body

It gives attachment to the following muscles:

1. levator ani.
2. External anal sphincter.
3. Muscles of the superficial perineal pouch (superficial transverse perineal and bulbospongiosus)
4. Muscles of the deep perineal pouch (deep transverse perineal and urethral sphincter).

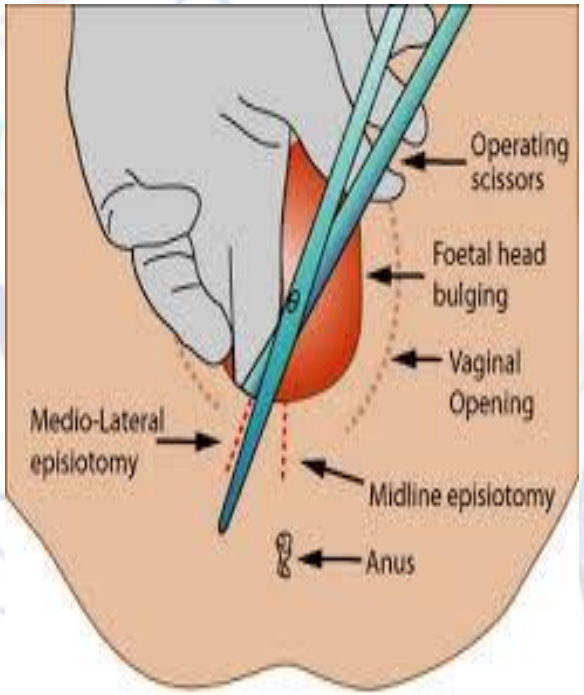

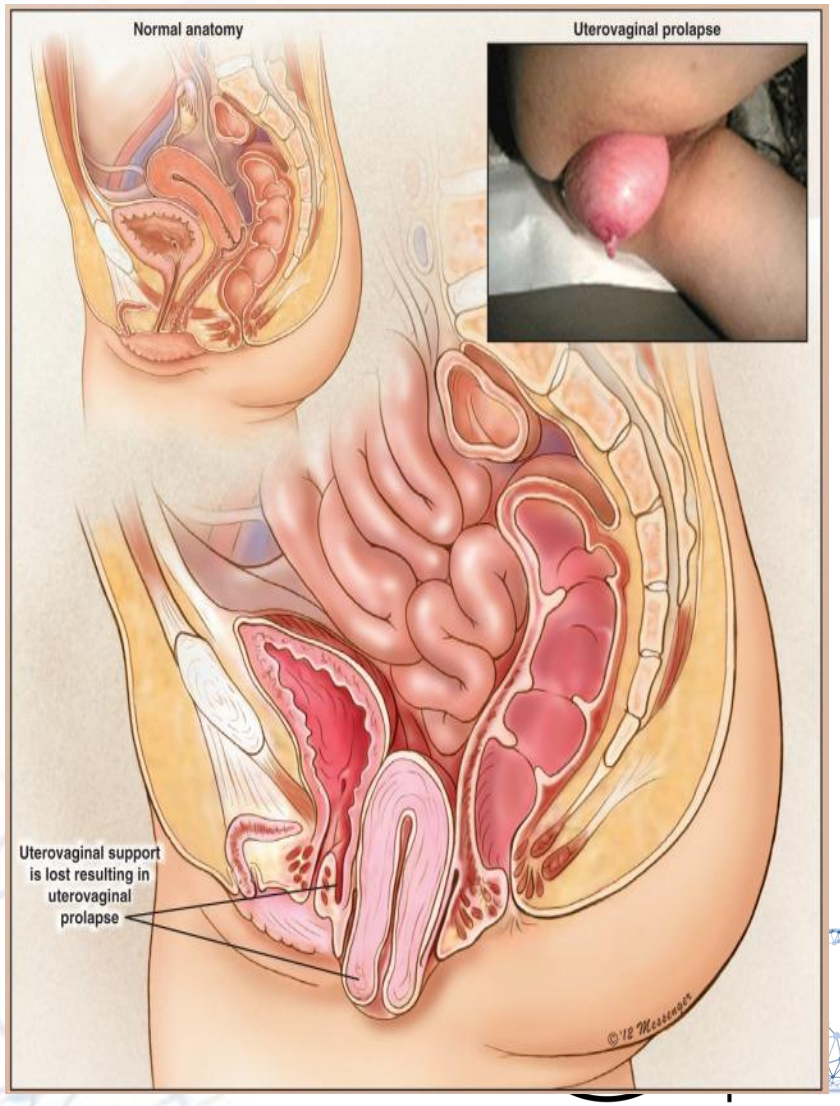

ANU MEDICAL SCHOOL PROGRAM

Clinical note

- Perineal body may be injured during labor with prolapse of the pelvic organs.
