Applied anatomy

2- Renal Pain & Colic

Renal pain is referred to the flank and may radiate downward into the lower abdomen.

In renal colic: The renal pelvis and the ureter send their afferent nerves into the spinal cord at segments T11,12 and L1,2. The spasm of the smooth muscle causes an agonizing colicky pain, which is referred to the skin areas that are supplied by these segments of the spinal cord, namely, the flank, loin, and groin.

Test Your Self

The following structures are related to the anterior surface of the right kidney except:

A. Ascending colon.
B. Right lobe of the liver.
C. Second part of the duodenum.
D. Coils of small intestine.

Test Your Self

The left ureter is crossed anteriorly by the following structures except:

A. Small intestine
B. Sigmoid colon
C. Duodenum
D. Gonadal vessels
