Pubic bone

- It is the anterior part of the hip bone. It has the following parts:

1- body : that articulates with the body of the other pubic bone in the symphysis pubis. Its upper surface shows the pubic tubercle and pubic crest medial to the tubercle.

2- superior pubic ramus : that shows the pectineal line and pectineal surface.

3- inferior pubic ramus that joins the ramus of the ischial bone in the ischio-pubic ramus.

Ischial bone

- It is the lower part of the hip bone.

It is formed of :

1- ramus of ischium that joins the inferior pubic ramus to form the ischiopubic ramus.

N.B. *pubic arch is formed of ischiopubic ramus of both hip bones*.

2- ischial tuberosity.

3- ischial spine that separates the greater sciatic notch above from the lesser sciatic notch below.
